I felt that this exercise taught me how to do a wide variety of things in MATLAB. Having no experience in MATLAB, I was a bit worried that this exercise would be very difficult for me. While it was manageable, I wish that the lesson had been spread out over the ten weeks we had climate change. This way, I could have slowly gotten comfortable with the software and how to use it. I also felt that learning it earlier could have been useful as my group could have used some of MATLABs functions to enhance our research article.
